Seafile Server Professional Edition

V1.0, 2023-03-11

datamate GmbH & Co. KG (datamate)

117er Ehrenhof 5

55118 Mainz

Germany

datamate is European distributor of Seafile Server Professional Edition.

You can contact us at seafile@datamate.org.

For more information on Seafile Server Professional Edition, please see <https://seafile.com> (English website) and <https://seafile.de> (German website).

Deployment

Requirements

The recommended deployment method for Seafile Server Professional Edition is via Docker. It can also be installed directly on Linux. The recommended operating systems are Debian/Ubuntu.

The minimum requirements are 4 cores and 8GB RAM. Seafile Server Professional Edition requires roughly 10GB of disk space including prerequisites and third-party components. With larger user numbers, more cores and RAM may be needed depending on the usage patterns.

For high-availability setups, Seafile Server Professional Edition supports clustering and object storage.

Setup

The Seafile Manual describes the installation of Seafile Server Professional Edition. You find the Seafile Manual at <https://manual.seafile.com>.

Specifically, please consult the following sections in the manual:

- [Docker-based single node setup](#)
- [Docker-based cluster setup](#)
- [Non-Docker single node setup](#)
- [Non-Docker cluster setup](#)

Customization

For advanced configuration and customization topics, please see the Seafile Manual at <https://manual.seafile.com>. The following section may be of particular relevance:

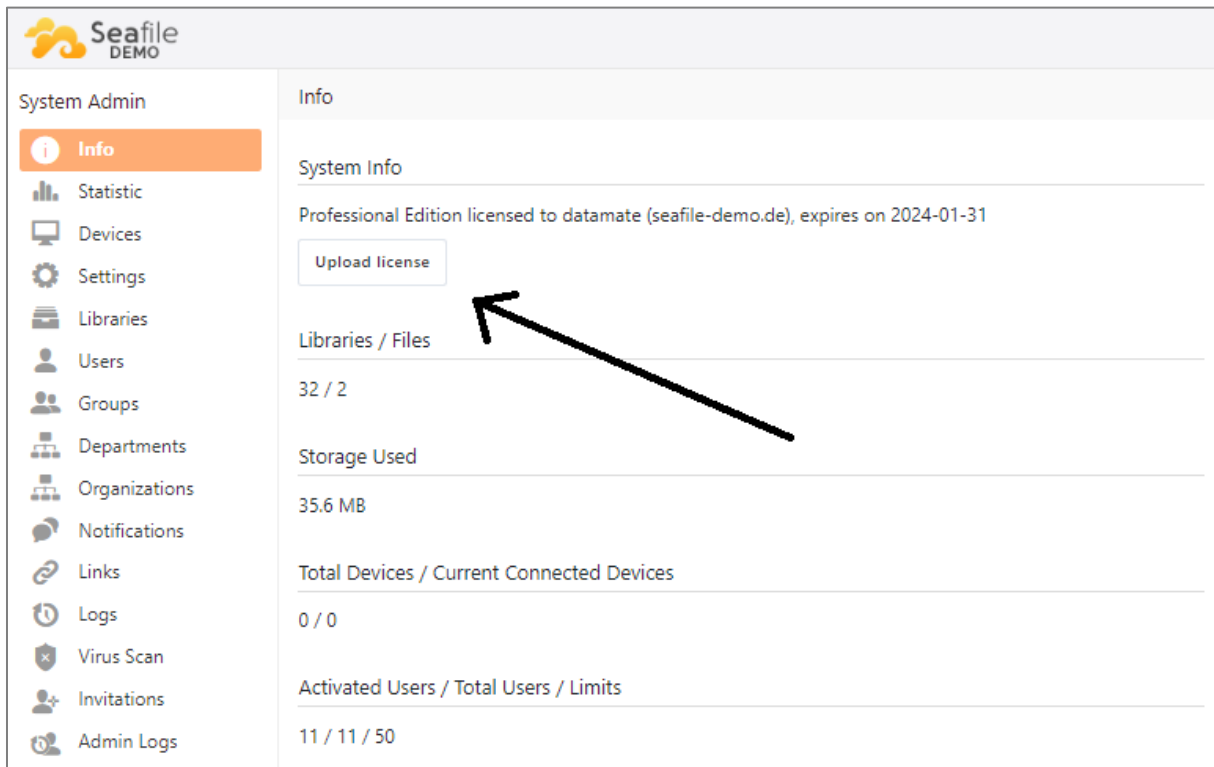

- [Antivirus integration](#)
- [ONLYOFFICE online editor integration](#)
- [Authentication via SAML](#)
- [Authentication via OAuth](#)
- [User role management](#)

Licensing

Seafile Server Professional Edition can be used without a paid license file with up to three users for trialing purposes.

Seafile Server requires a paid license for use with more than 3 users. You can purchase a license for Seafile Server Professional Edition in KooGallery. For a custom quote, please contact datamate GmbH & Co. KG for a quote.

The license file must be available on the Seafile Server when starting the Seafile service. A new license file (e.g. after a license extension or upgrade) can also be applied via the system administration in Seafile's web interface:

If the license file is not valid or the number of licensed users is less than the number of active registered users, the Seafile service will refuse to start.

The [Seafile EULA](#) applies for paid licenses as well as when using Seafile.

Troubleshooting

Seafile has an active community. The Seafile Community Forum is available at <https://forum.seafile.com>.

As a license holder of a Seafile Server Professional Edition license, you are eligible for email support. Please contact seafile@datamate.org.

Usage

You find an English user manual at <https://help.seafile.com/>. A German user manual is available at <https://de.seafile.com/support/benutzer/anleitung>.
